April 2007

News and Comment

We are just about finished with work on DB/C DX 15. We plan to begin beta testing in the next couple of weeks. Thanks to all who've volunteered to help with testing. We'll provide details of the new features in DB/C DX 15 in next month's newsletter.

There is one new initiative that we have finished in DB/C DX 15 that might be quite interesting to you, so I will provide a quick summary here. In the past, the client software of Smart Client has been provided in two versions - the Java Smart Client and the Win32 Smart Client. In DB/C DX 15, we're adding a third version - the C# (.NET) Smart Client. By itself, that's not a big deal because its functionality is essentially the same as the Win32 Smart Client. However, with DB/C DX 15, we will release the source code for both Java and C# versions of Smart Client. One customer has already taken the C# code and modified it to do a few extra things that their application required. I suspect others may have similar requirements. So if you're interested in getting started with this new feature now, send me an email and we'll add you to our list of early testers.
